

ES

Energy Speaker

by Digital Dowsing LLC.

The ES is easy to use:

1. The 1/8 inch “3.5mm” stereo jack is designed to plug in to the speaker output of most standard electronics.
2. Simply plug the ES in to your audio source.

How does the ES work?

The ES will reproduce the sound output from your audio source as a magnetic field. Using a simple inductor *like a telephone pickup*, you can listen to the magnetic output of the ES.

Now you can play trigger music, white noise and more without bleed through into your recorded audio.

You can also test the ES by placing an EMF meter close to the ES.

(We recommend that you keep recording devices at least 1 foot away from The ES. Some audio recorders can pick up the magnet field when close to the device.)

EVP experiments to try!

The beacon experiment: Play a message repeatedly through the ES.

White noise: Send white noise to the ES and conduct your EVP session without interference.

Trigger music or sound: Play *period specific* music or sounds through the ES.
